EDUCATION

Antelope Valley College Lancaster, CA
Associate of Science, Computer Science August 2023 – May 2025

California State University, Bakersfield – Antelope Valley Lancaster, CA
Bachelor of Science, Computer Science August 2025 – present
Anticipated graduation May 2027

Completed Coursework: Programming Fundamentals, Discrete Structures, Computer Architecture I: Assembly Language Programming, Computer Architecture II: Organization, Programming Languages, Software Engineering, Database Systems

SKILLS

Programming Languages: C, C++, Java, JavaScript, Python, HTML, CSS, SQL
Developer Tools: Visual Studio Code, Git, GitHub, Vercel, React
Business Software: Microsoft Word, Google Docs, Google Slides, Google Sheets
Languages: Bilingual in English & Spanish

PROJECTS

Tutoring Center Database – SQL Database*, CSUB Class Project (Team)*
Languages and Tools used**: SQL, PHP, CSS**

- Designed and implemented a relational database using SQL to manage tutor and student accounts, schedule tutoring sessions, and manage tutoring sessions and students
- Developed SQL queries, stored procedures, and triggers to manage sessions automatically and keep data accurate
- Built a functional web interface using PHP and CSS, allowing tutors and students to sign in , create, join, and manage tutoring sessions
- Served as lead of 4-member development team by coordinating meeting schedule and assigning tasks to ensure timely project progression and cohesiveness of design

Casino Table Games – *Mobile App*, Personal *Project*
Languages and Tools Used: React Native, Expo Go, TypeScript, VS Code

- Developed a mobile app allowing users to play roulette or blackjack with a virtual betting system
- Built an interactive user interface using React Native and Expo, allowing users to place bets, track their balance, and see game updates instantly
- Built state management and dynamic components to handle multiple game types for smooth user interactions
- Structured code using modular components and reusable functions to make adding new features efficient

Stock Tracker App – *Mobile App*, Personal Project
Languages and Tools Used: JavaScript, HTML, CSS, React, Alpha Vantage API, Chart.js

- Used React and the Alpha Vantage API to build a web application that retrieves and displays stock market data based on user inputs
- Built interactive stock price charts using Chart.js in a responsive React interface
- Fetched and updated stock data dynamically using asynchronous requests to update stock data based on user searches

EXPERIENCE

Bakersfield, CA

September 2025 – Present

- Studied programming language design concepts including procedural, object-oriented, and functional programming
- Implemented programming assignments using C, Python, and Java to analyze differences between programming languages
- Completed programming exercises demonstrating language features and runtime behavior

Software Engineering – Class Experience Bakersfield, CA

September 2025 – Present

- Learned Agile development practices, version control with Git, and team collaboration
- Managed project timelines, assigned tasks, and presented the project to instructor and peers
- Collaborated in a 4-person team to develop a game launcher using Godot

Database Systems – Class Experience Bakersfield, CA

September 2025 – Present

- Designed and implemented the Tutoring Center Database using SQL, PHP, and CSS
- Created ER diagrams, relational schemas, queries, stored procedures, and triggers to manage tutor and student sessions
- Built a web interface for user authentication and session management using full-stack development skills

Application Development – Class Experience Bakersfield, CA

January 2026 – Present

- Developed a personal introduction app using React Native and Expo Go, learning about component-based UI and cross-platform deployment
- Implemented a Pokemon information search lab using the Pokemon API, using dynamic data retrieval and display within the app
- Gained hands-on experience with mobile app design, state management, and integrating external APIs
